Where an interested customer loses momentum, and what to change first

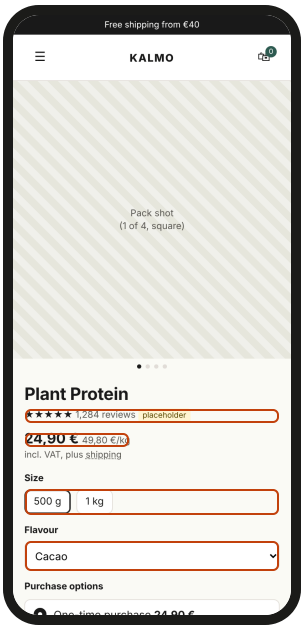

Worked sample on a fictional protein brand: friction map, a product page rebuilt around the buying decision, a paid-traffic landing page, and the German rules that shape them.

7/7 vs 4/7
decision items in the first phone screen

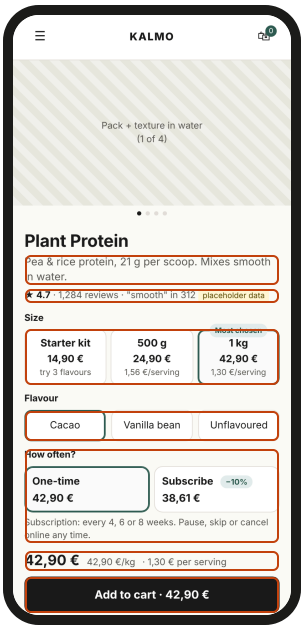

4 taps vs 7
to put "1 kg, Vanilla, every 8 weeks" in the cart

100% vs 57%
of scroll positions with Add to cart in reach

0 vs 6
tap targets under 44 px

Typical theme: 4/7 in the first screen

Decision-led: 7/7, boxed

The question order

1. What is it, and why this one?
2. Do people like it?
3. Which size, and why? (per-serving price, or the kit)
4. Which flavour?
5. Once, or regularly? Can I stop?
6. What will I pay? (per kg, per serving)
7. Add.

Item	Typ. screen	above btn	New screen	above btn
What it is	×	×	✓	✓
Reviews signal	✓	✓	✓	✓
Size choice	✓	✓	✓	✓
Flavour choice	✓	✓	✓	✓
One-time vs subscription	×	✓	✓	✓
Price + price per kg	✓	✓	✓	✓
Add to cart	×	✓	✓	✓

Subscription terms: typical layout only links to "How subscriptions work"; decision-led states frequency and "pause, skip or cancel online any time" at 706px.

Where momentum drops: hypotheses to confirm with your data in week 1

HIGH
Ad to landing
Ad sells texture; the click lands on a generic collection. Fix: a landing page that continues the ad.

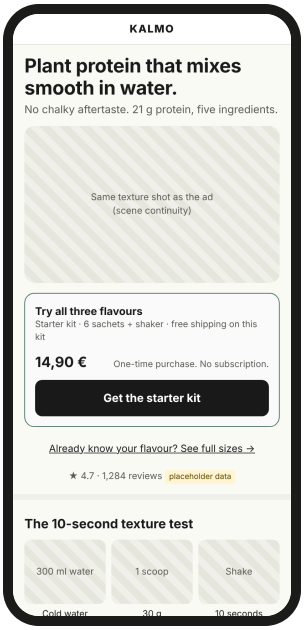

HIGH
Product page, top
"What it is" sits below the button (typical layout: 1155px). Fix: one line under the title.

HIGH
Choosing
Sizes without a reason to pick; terms behind a link. Fix: per-serving size cards, kit as a size, terms in view.

FOUND WHILE PROTOTYPING
Cart
Subscribe & save takes 1 kg to 38,61 €, under the 40 € free-shipping line. Fix: subscriptions ship free.

LEAVE MOSTLY ALONE
Checkout
Shopify's checkout is standardised. Also probably unchanged: brand identity, homepage hero, short navigation.

A landing page that continues the ad

Headline, price and button in the first screen · button in reach at 100% of scroll positions · 1 tap to an open cart

1. **Message match:** the ad's words and image, so the visitor knows they are in the right place.
2. **Offer for cold traffic:** a starter kit, clearly one-time. Strangers are not asked to subscribe.
3. **Proof of the one claim:** the 10-second texture test, then reviews filtered to texture.
4. **Objections, named** in the brand's voice: no countdown timers, no badge wall.
5. **What arrives**, then **what happens next**: kit to 1 kg and an optional subscription, without pressure.
6. **Questions, then the same button.** One offer, never a competing one.

Page	Arrives from	Its job	Leaves out
Homepage	Brand search, returning	Orient	Long education
Product page	Collections, search, returning	Close the decision on one product	Competing offers
Landing page	One ad, one audience	Carry one promise to one offer	Navigation, other products

German rules that shape the design (constraints, not a legal review)

Unit price at a glance · PAngV §4, §5
Price per 1 kg or 1 l with every price, including the subscription price; not behind a tap or mouse-over.

Subscriptions · §312k BGB
"Verträge hier kündigen" reachable from every page since July 2022; BGH (16 July 2026): no pause or discount offers on the confirmation page. So "cancel online any time" belongs next to Subscribe, as reassurance.

Health claims · Reg. 432/2012
Only authorised wording. Protein has three claims (muscle growth, muscle maintenance, normal bones). "Supports recovery" is not one.

Strike-through prices · PAngV §11
Advertised reductions show the lowest price of the previous 30 days, so offers are designed with it built in.

How I would work

Week 1 diagnosis

1. Split the funnel by device, landing page, new vs returning.
2. Watch 40-60 mobile sessions on the highest-spend landing pages.
3. Tag reviews, tickets and on-site search by objection.
4. Buy every product on Android and iPhone, kit and subscription included.
5. Friction map with evidence, confidence, fix, and what not to change.

I do strategy and UX, Figma design (desktop + mobile, components with states, developer specs, your brand), and Shopify OS 2.0 implementation as an optional Phase 4.

Diagnosis	Wireframes	Figma hi-fi
$1,400	**$1,400**	**$2,000**
weeks 1-1.5	weeks 2-3	weeks 4-5

$4,800 fixed, 5 weeks for the CRO review, priority product page and one landing page.
